Experience

Tata Consultancy Services - Client: GE Vernova

October 2025 – Present

Backend Development

Hyderabad, Telangana

Technology Stack : c#, Angular, .Net, GIT

Advance Distribution Management System - Series - 3(ADMS S3)

- Contributed to the full Software Development Life Cycle (SDLC) in an Agile/Scrum environment, including requirements analysis, backend development, debugging, testing, code reviews, deployment support, and production issue resolution.
- Designed and developed scalable backend features by translating business requirements and user stories into maintainable enterprise solutions while implementing robust business logic.
- Performed root cause analysis (RCA) to investigate and resolve production defects, optimized application performance, and enhanced system stability through debugging and continuous improvements.
- Collaborated with frontend developers, QA engineers, Product Owners, and cross-functional teams to deliver high-quality features, participate in sprint ceremonies, and ensure successful feature delivery.
- Utilized Git for version control, pull requests, and collaborative development, and Jenkins for CI/CD build validation and deployment support while ensuring code quality through integration testing and verification.

Tata Consultancy Services

April 2025 – June 2025

Initial Learning Period

Trivandrum, Kerala

Technology Stack : HTML, CSS, JavaScript, AWS(S3, EC2, VPC, Lambda)

Intellidock

- Designed an IoT-enabled Smart Dock Management System using RFID, GPS, IoT sensors, and cloud technologies to optimize berth allocation, enable real-time vessel tracking, and improve operational efficiency in fishing ports.
- Conducted end-to-end product research, including stakeholder analysis, Voice of Customer (VoC), market research, competitor benchmarking, and patent analysis to define business requirements, user stories, and functional specifications.
- Architected the end-to-end solution by designing system architecture, context diagrams, workflow models, and MVP architecture, enabling scalable integration of IoT devices, cloud infrastructure, and intelligent dock management.
- Developed a cloud-connected dashboard for real-time IoT device monitoring and operational analytics, providing centralized visibility and supporting data-driven decision-making.

Education

Sagi Rama Krishnam Raju Engineering College

Feb 2021 - April 2024

Bachelor of Technology in Electronics and Communication Engineering

Bhimavaram, Andhra Pradesh

Projects

Design of FIR filter using Area and Power Efficient Hybrid adder and Multiplier | Verilog

April 2024

- The individual led a research project on optimizing hybrid adders for VLSI systems, designed a novel 16-bit hybrid adder, and achieved significant improvements in area and power efficiency.
- Implemented the hybrid adder architecture using Vivado 2019.1 and conducted performance evaluations with Cadence Genus tools.

Building an Architecture and Database Deployment | AWS

January 2021

- Successfully implemented EC2 and VPC services, fortifying the organization's cloud infrastructure.
- Enhanced security protocols through adept configuration of Subnets, Availability Zones, and Security Groups.

Technical Skills

Languages: Java, Python

Technologies: HTML, CSS, JavaScript, MySQL

Concepts: OOPS, Unit Testing

Certifications

Programming Essentials in Python (PCAP) – CISCO

CCNAv7: Introduction to Networks – CCNA
